

BUMBLEBEE WORKSHOP

We have been learning:

- Bumblebee numbers are declining due to farming practices, bee unfriendly gardens and climate change
- Bumblebees are important for pollinating plants and so they are essential to help grow fruit and vegetables we need for a healthy diet
- The different ways we can support bumblebees
 - How to make a healthy snack which using 3 pollinated ingredients

chance of winning by
answering our short 2
minute survey

DID YOU KNOW?

There are 24 of bumblebee species in the UK? We have lost 97% of flower rich meadows over the last 90 years which are bees favourite habitats. This has led to 8 out of 24 species becoming endangered.

To help prevent their decline why not try planting colourful plants such as herbs, vegetables, lavender or sunflowers in your garden or in pots on your balcony or windowsill?
